

LONE WORKER MONITORING

HOW IT WORKS

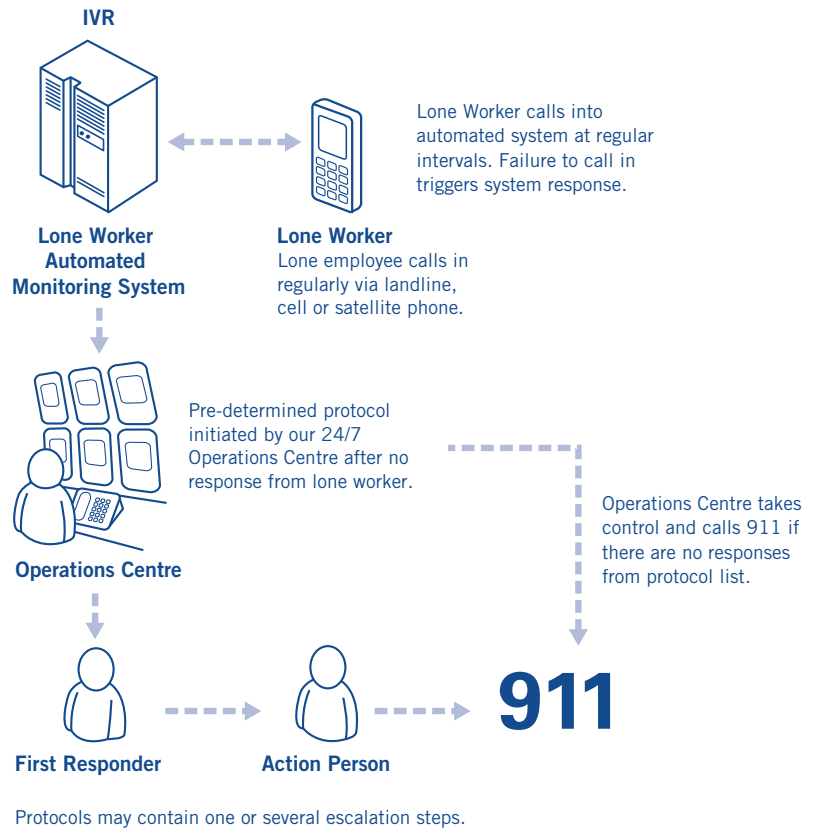

Our Lone Worker Monitoring program helps organizations like yours ensure the safety of employees who work alone. Lone Worker Monitoring is a simple to use, always vigilant and cost effective solution. It protects lone employees regardless of their work environment:

- > employees regularly call into the automated monitoring system according to their personally set schedule;
- > call-in can be done via landline, cell phone or satellite phone;
- > automatic escalation is triggered by failure to call-in or to respond;
- > our 24/7 Operations Centre staff become actively involved, following a predetermined protocol;
- > protocols can be set up to have as few as one escalation call or several before emergency response is sought.

ENHANCED SAFETY

Lone Worker Monitoring provides peace of mind for everyone – employees and employers. Should the need arise it ensures that appropriate action is taken to locate lone working employee users as well as to facilitate rescue and/or recovery. It provides dependable live support for your employees, ensuring a planned response and enhanced safety:

- > 24/7 monitoring by our Operations Centre - employees are never alone;
- > dependable system - no missed calls for help, doesn't fall asleep;
- > tracks employee safety status and creates reports.

LONE WORKER MONITORING

ECONOMICAL

Our Response Centre eliminates the need for your own dedicated security staff, and a telephone is the only equipment needed, making the program a cost effective option:

- > no capital costs and low user fees;
- > no additional staff required for “buddy system” or in-house monitoring;
- > one phone number can be registered and used by multiple workers, eliminating multiple user fees.

EASY, FLEXIBLE AND PERSONALIZED

The Lone Worker Monitoring program is both an automated and hands-on monitoring system, giving each lone worker the flexibility and protection they need:

- > easy one-number call into automated system;
- > automatic trigger to Response Centre initiating planned response;
- > protects a work site, an individual or multiple lone work groups;
- > system identifies worker by name;
- > easy system activation and deactivation.

EMPLOYER PROTECTION

Commissionaires uses the Lone Worker Monitoring program with our own employees and can attest to its effectiveness and efficiency, because we believe that providing adequate safety for our employees is not only our legal obligation, but also our responsibility as an employer.

Let Commissionaires help you keep your employees safe.
